

CLIMATE and ENERGY REGION

>> Climate protection can only succeed if everyone is aware of their own options for action <<

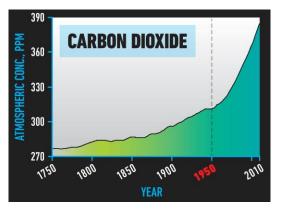

Background

- Global and national agreements have small or no impact at regional level
- lack of resources in the communities.

→contact person and support for the municipalities in matters of climate and environmental protection is being installed

 federal policy (mission2030) and provincial policy (Tyrol2050) is consistently implemented and promoted at regional level

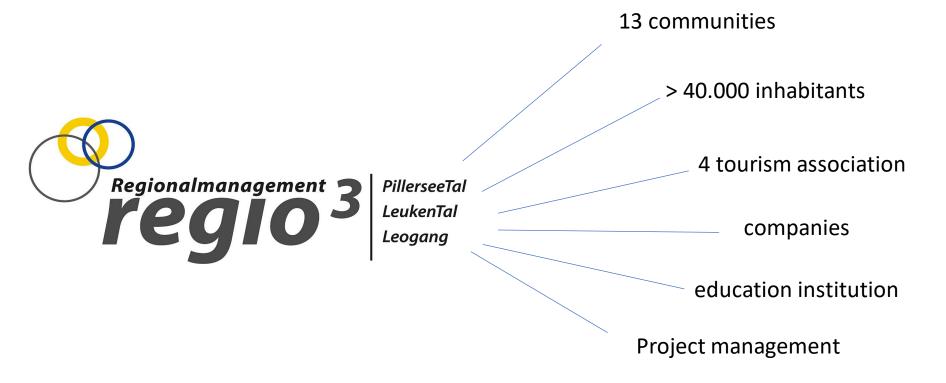

Important factors

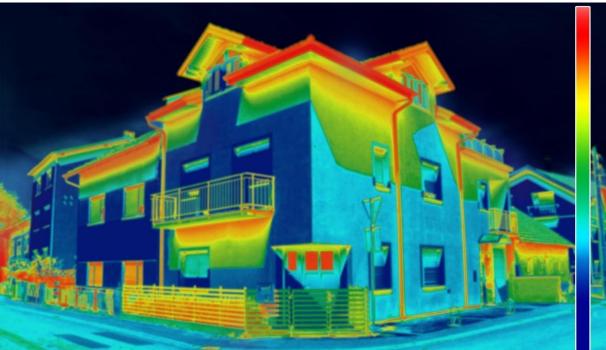

Methods

- intensive environmental education and awareness raising
 - information events
 - funding consulting
 - workshops
- initiation, monitoring and implementation of subprojects
 - → through the integration of companies, municipal offices and other initiatives innovative solutions concerning mobility management, sustainable procurement and the use of renewable energies can be made

Challenges

- People take time to deal with topic
 - >permanent presence in regional and social media
 - > sensitization
- Communities deal with climate change issues
 - initiation, monitoring and implementation of subprojects by projectmanagment
 - Reduction of work for communities
- Lead communities and inhabitants to invest in climate protection
 - Point out potential
 - *>* inform about fundings

Lessons learnt

1. relevance of the topic has not yet reached all communities

2. the importance of central person/project management

3. People don't know about their options.
