

Finnish experiences on rural proofing

Ministry of Agriculture and Forestry, Ministerial adviser / Rural Policy Council, acting secretary general Antonia Husberg ENRD 27th of January 2022

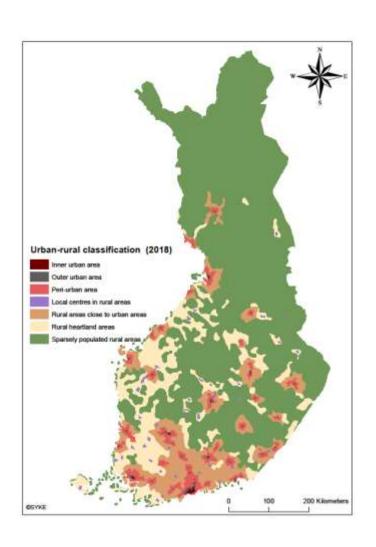

- 1. Finland one of the most rural countries
- 2. Rural proofing in Finland
- 3. Case examples
- 4. Recognised strengths and weaknesses
- 5. Rural proofing of legislative drafting

Finland – one of the most rural countries

- 95% of Finland's surface area is rural
- 68% of the surface area is sparsely populated (the green area on the map to the right)
- 28% of the Finnish population
 (1,5 Mil. people) live permanently in the rural areas
- 18,2 people/sq km of land area (in SPAs 2,5)
- 38% live in rural areas part-time (2,4 Mil. people)
- 40% of businesses are located in rural areas
- 370 000 km long *private* road network (tot. road network 480 000 km)
- Finland's national economy is, as an industrial country, exceptionally strongly based on added value obtained from natural resources located in rural areas.

Rural proofing in Finland: timeline

2007: Development started, inspired by international examples. Rural Policy thematic group (TG)

2008: TG work backed up by OECD country recommendations

2009: Rural Policy Programme and Government report to Parliament

2009-2019: TG2, R&D-projects, pilots and broad cooperation (Association of Finnish Municipalities, Finnish Evangelical Church...)

2016-2020: Rural Policy Council

(5th assignment: development, promotion and monitoring of rural proofing)

2014: Rural Policy programme

2011: National regional development objectives

(two measures targeted at municipal mergers and policy at all levels)

2011: Government resolution

(two measures targeted at the municipal and regional level)

2017-2019: Parliamentary working group on sparsely populated areas

2021: Rural Policy Council (2021-2025) and Rural Policy Programme (2021-2027)

2021: Interministerial working group and Guidance on the impact assessment of government legislative proposals 2022

- Methods used:
 - 1. Check-list: "does the proposal have impacts on..."
 - 2. Participative workshops (basic model: Muilu et. al. 2013)
 - 3. Relevant (geospatial) data
 - 4. Questionnaire
- Has mainly been used and developed at the municipal and regional level.
- Differences in implementation on the regional/municipal and national level:
 - On a regional and local level the process includes a large number of actors from both the public, private and third sector
 - On a national level impact assessment is often carried out by one or a few public officials.
 The method is being developed (assessment of government proposals).

Rural proofing in Finland: check-list

- Check-list: "does the proposal have impacts on..."
 - the living conditions, health, well-being, everyday safety and security of people living in rural areas?
 - livelihoods (which livelihoods) and/or the economic structure or the prerequisites for business activities in rural areas?
 - the national security of supply?
 - the prerequisites for finding employment, the income of people living in rural areas or the forms of working?
 - the availability and stability of employees, and functioning of the labour market in rural areas?
 - on smooth running of everyday life and the equal and unimpeded access to and accessibility of services (e.g., health and social services, basic education, education and training, safety and security, digital services, transport, postal services, cultural and sports services) in rural areas?
 - transport connections, travel chains or the conditions for mobility in rural areas?
 - the environment, landscape and/or culture in rural areas?
 - the realisation of democracy, fundamental rights and equality between individuals and regions?
 - activities in associations, inclusion and communality and/or social capital in rural areas?
 - any other economic impacts, such as impacts on the economy and/or vitality of rural areas?
 - other topics e.g., between different types of impacts?
- If yes, a more thorough impact assessment should be carried out (participative workshop, questionnaire, geospatial data-analysis).

Rural proofing in Finland: basic elements

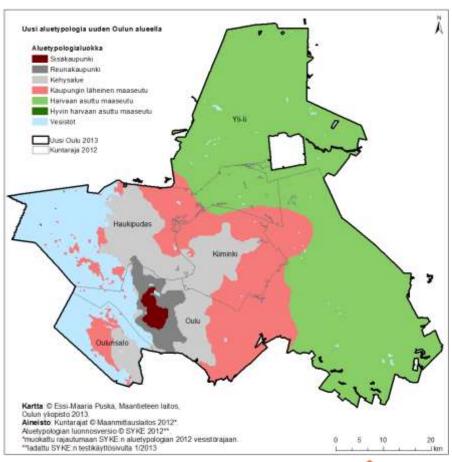

3

- New municipalities (after municipal mergers) are large and consists of different types of urban and rural areas (as shown in picture of the City of Oulu)
- Themes raised during rural proofing of local government reorganisation:
 - How to ensure that the areas are developed equally (livelyhoods, vitality, infrastructure, education, investment, funding)?
 - How to ensure democracy that the people in rural areas are heard and have the opportunity to participate in society?
 - How to ensure accessibility to public service (health care, school, social services, public transport...) for people living in rural areas?

Case example: process of rural proofing of regional reform (regional level)

Recognised strengths and weaknesses

Strengths

- Adaptable method
- Has raised awareness of rural issues
- The "results" from rural proofing can be used in further development work (strategies, programmes)
- The (participative) process of rural proofing has improved the cooperation among actors.
- Enhances place based policy and development.

Weaknesses

- Voluntary (few uses rural proofing)
- Resource-demanding
- Willingness to **take charge** of the process (linkage to municipal council, steering group, board i.a.)
- One of many impact assesments (not a priority)

Rural proofing of legislative drafting

- Rural proofing has had broad political support from the start, but elected officials have underlined the importance of rural proofing to be voluntary
- Rural proofing will be a part of the new Guidance on the impact assessment of government legislative proposals in 2022 (Ministry of Justice)
- Interministerial working group on rural proofing (2021-2022) (Ministry of Agriculture and Forestry): Developing the method in order for it to be easily used within existing legislative processes.
- Investments in raising awareness and training of legislators within central government.
- Rural Policy Council, rural policy networks and Island Committee processes for supporting rural proofing (knowledge, information) and assessing
 impacts of legislative drafting.
